# REVISION HISTORY

---

Revision index	Author of the revision	Date of the revision	Nature of the revision
A	JGD	01/07/2020	Update and addition of run-off as standard

# INTRODUCTION

## 1. FOREWORD

Thank you for choosing Charvet equipment for your installation. Our equipment is designed and manufactured in France by our teams, who are committed to meeting five targets: Robustness, performance, hygiene, ergonomics, and safety.

If, however, despite our commitment and effort, you encounter a problem with one of our products, please get in touch with our After-sales service.

## 2. USEFUL CONTACT DETAILS

For any information, or sales request:

✉ [info@charvet.fr](mailto:info@charvet.fr)

☎ +33 (0)4 76 06 64 22

For all technical assistance requests, contact our After-sales service department:

✉ [sav@charvet-sa.fr](mailto:sav@charvet-sa.fr)

☎ +33 (0)4 76 06 64 22

## 3. WARRANTY

INFORMATION

The warranty is part of the sale contract. For any installation or work carried out under the warranty, contact an authorised dealer. In addition, we would like to remind you that the CHARVET warranty does not cover damage caused by faulty installation, misuse or inadequate maintenance. Please read this manual in full.

## 4. RESTRICTIONS ON USE

INFORMATION

This appliance must be used by qualified personnel only. It is mandatory that the installer provides training to the users of the appliance once the installation is complete. After the user training, the User Manual (below) must be passed to the final user for their records. CHARVET equipment should not be used by untrained personnel unless they are under the supervision of a person who is liable and can guarantee their safety.

## 5. EQUIPMENT DISPOSAL

INFORMATION

### Exclusively for France:

In accordance with Decree No. 2014-928 of 19 August 2014, concerning the disposal of waste and electrical and electronic equipment, the Paul CHARVET company is responsible for the organisation and financing of the collection and processing of professional EEE placed on the market from 13.08.2005. As such, the CHARVET company is a member of ECOLOGIC, an eco-organisation approved by the state.

### How WEEE is disposed of:

At the end of its life, the equipment must be palletised and made available to the carrier in an accessible place. Except in exceptional circumstances, the equipment shall not have been dismantled, even partially. Otherwise, the CHARVET company reserves the right to re-invoice the costs of processing and taking responsibility for the equipment.

In addition, all requests weighing less than 500 Kg shall either be dropped off by the end user at a collection point or collected from the end user's premises, in which case the end user will be liable to pay the cost of such collection.

### For any request for collection:

[www.e-dechet.com](http://www.e-dechet.com)

+33 (0)1 30 57 79 14

# INSTALLATION

## 1. GENERAL POINTS

The installation must be performed by a certified installer, who will install the equipment in compliance with the instructions provided in this manual and in compliance with local regulations.

Attention must be paid to the local regulations concerning fire prevention.

## 2. HANDLING

For all handling, leave the appliance on its wooden pallet during the handling process until the final installation.

Unpack and check the appliance for damage upon receipt.

WARNING

### **In the event of damage:**

In case of damage, detail it immediately on the delivery note; notify the carrier by registered mail with acknowledgement of receipt within 48 hours.

## 3. INSTALLATION

The appliance must be placed under a functioning extraction hood. If the appliance is to be installed against a wall or partition, near a piece of furniture or decorative borders, it is recommended that these are made of fireproof material.

If this is not the case, they must be protected by an approved fireproof, insulating material. If there is any doubt about the nature of the materials in the vicinity of the appliance, place it at a minimum distance of 20 centimetres from the wall.

## 4. ASSEMBLY AND SPECIAL PRECAUTIONS

It is mandatory that the appliance be levelled before any use. To set the level it is possible to adjust each leg (or bolt if using a concrete plinth) individually.

Fig. 1

## 5. MOUNTING THE FLUE

Our A-type gas appliances should not be connected to a flue gas pipe. This means a flue, which is supplied with the appliance, must be mounted. To do this, simply:

- Position the flue in place.
- Two fixing screws, on the right and the left, can be reached from the top of the flue.
- Put the hooks at the bottom of the flue in place under the top.
- Tighten the two screws on the flue, which can be accessed through the holes in the grid at the top of the flue, until it is locked in place.

Fig. 2

WARNING

It is imperative that the original flue(s), supplied with the appliance, be mounted.

Also, as the flue's hooking system allows a little movement, it is advisable to check its correct alignment with the appliance's internal flue gas pipe.

## 6. DATA PLATE

Each appliance has a data plate. Its location varies according to the configuration of the appliance:

- **The appliance is mounted in open cabinet or closed cabinet configuration:**  
The data plate is underneath the removable bottom of the cabinet.
- **The appliance is mounted in warmer configuration:** As a priority, the data plate is installed on the front of the appliance. It is also possible for it to be on the burner support or the protective casing of the appliance's control panel.
- **The appliance is mounted in (electric or gas) oven configuration:**  
The data plate is on the front of the appliance.

# ELECTRICAL CONNECTION

WARNING

## Instructions for the electrical connection of the appliance:

- Do not work on live cables.
- The appliance must be earthed.
- Use 245 IEC 57 or 245 IEC 66 standard cables (or other cables with similar characteristics).
- Ensure that the user's fixed installation has an all-pole circuit breaker with point gap in compliance with standard EN 60335 – 1.
- If the cable is damaged, a qualified person must be called in to replace it.

## In the case of a mobile appliance connected to the network via an electric socket:

- The size of the electric plug depends on the power of the appliance. If necessary, replace it with a socket with the same characteristics.
- During use, the electric socket must remain accessible at all times.

## 1. BEFORE ELECTRICAL CONNECTION

Before making the electrical connection of the appliance, you must:

- Locate the position of the electrical junction box and the equipotential bonding terminal.
- Check that the appliance's power supply is switched off while connecting the appliance.
- Ensure that the electrical voltage of the supply is compatible with the voltage and power required by the appliance.

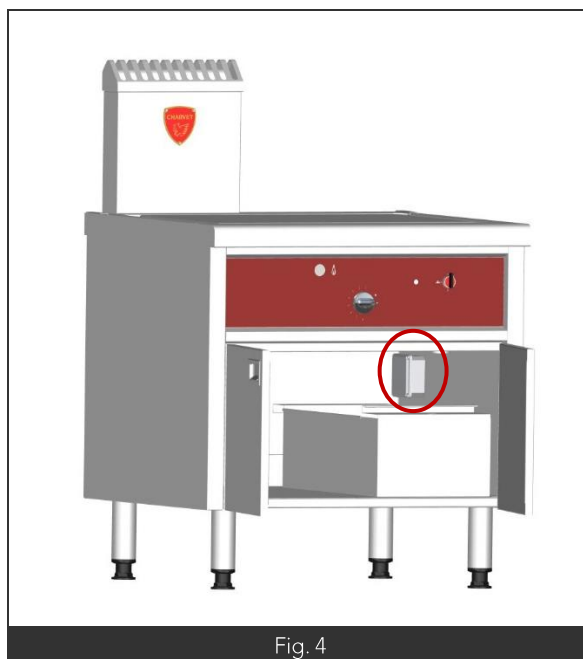

Fig. 4

## 2. ELECTRICAL CONNECTION

Connect the installation's fixed electrical supply to the appliance's electrical circuit via the junction box.

Fig. 5

### Equipotential bonding:

The appliance must be included in an equipotential system, the operation of which must be verified in accordance with the regulations in force in the country of installation. Connect the equipotential terminal, the location of which is marked by the standard symbol IEC60417-502 2002-10 (shown in illustration).

### 3. AFTER CONNECTION

After connecting the appliance, ensure that the cable connections to the terminal block are sufficiently tight, and that the system is properly earthed.

# GAS CONNECTION

WARNING

## Instructions for the connection of the gas-powered appliance:

- The device must be installed according to best practice or else in accordance with the reference standards or the instructions in this manual.
- This appliance is an A-type and must not be connected to a flue gas pipe.
- The room in which this appliance is installed must be sufficiently ventilated and equipped with an air extraction system for the burnt gases.
- Pay attention to the required new air flow (in m<sup>3</sup>/h) which must be  $2 \times P_n$  (rated power in kW).
- Place a gas block valve between the appliance and the user's fixed supply. This valve must be accessible at all times.

## 1. BEFORE CONNECTION

Before connecting the appliance to the gas supply, you must check:

- The mains are free of obstructions, and clean.
- The gas supply pipe is of the correct size for minimum pressure drop. The diameter of the pipe depends on the capacity of the appliance, the gas pressure, and the path travelled (length, number of elbows).
- The type of gas used: Check that the appliance is set for the type of gas delivered to the installation (type/pressure). This information is marked on the label near the gas connection.
- That the new air flow to ensure combustion is sufficient (see table below).

Appliance code	Appliance type	Power (kW)	Required new air flow (in m <sup>3</sup> /h)
V03499	PRO800-B-G1-PLANCHA-70/50-RUISSELEAU	16.5	33
V03501	PRO800-R-G1-PLANCHA-70/50-RUISSELEAU	16.5	33
V03515	PRO900-B-G1-PLANCHA-70/50-RUISSELEAU	16.5	33
V03518	PRO900-R-G1-PLANCHA-70/50-RUISSELEAU	16.5	33
V03511	PRO800-1 / 2B-G1-PLANCHA-30/50-RUISSELEAU	10	20
V03512	PRO800-1 / 2R-G1-PLANCHA-30/50-RUISSELEAU	10	20
V03527	PRO900-1 / 2B-G1-PLANCHA-30/50-RUISSELEAU	10	20
V03528	PRO900-1 / 2R-G1-PLANCHA-30/50-RUISSELEAU	10	20

## 2. GAS CONNECTION

Connect the appliance to the gas supply, via the M1/2" threaded connector (Fig. 7 Item 1). To do this, remove the back of the appliance (Fig. 7 Item 2) in order to make the connection.

**Note:** A hose connection is possible provided that the hose is approved according to the conditions of the country of installation and is suitable for the type of gas used. The length of this hose is limited to 1.50m.

Fig. 7

## 3. CHECKS AFTER CONNECTION

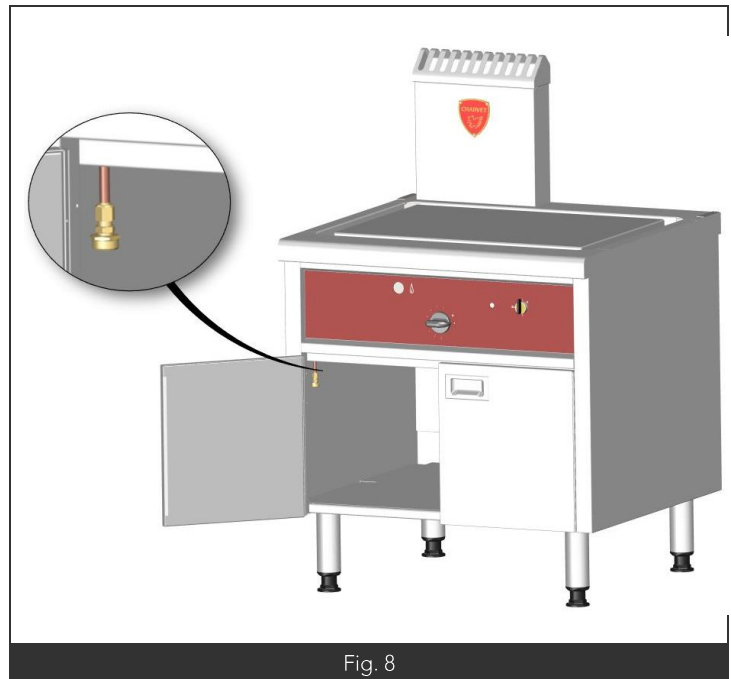

After connecting, check:

- The gas-tightness of the circuit up to the gas tap manifold.
- The pressure of the appliance when in operation (see 'Adjustments – Maintenance' section below).
- That the flame pattern and colour is correct.
- The correct operation of the appliance.

# WATER CONNECTION

If the appliance is fitted with a drain or a mixed water tap, the connection must be made at the connection point(s) on the appliance intended for this purpose. These are to be found at the location indicated on the plumbing drawing.  
The same is true for the water drains.

Your water hose should be connected to the connector located underneath the plancha and inside the plancha's closed cabinet if fitted.

# STARTING UP

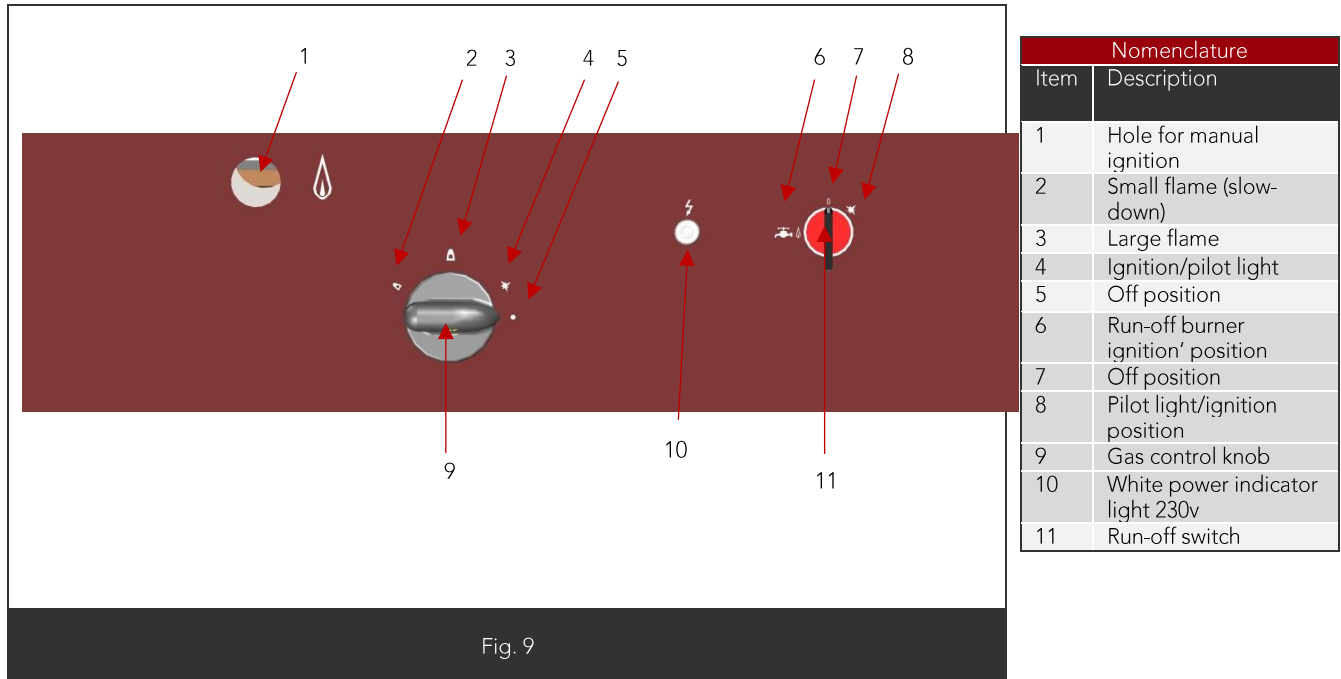

## 1. GENERAL POINTS

Once the appliance has been installed, remove all protective plastic wrapping, then test each function of the appliance; please refer to the paragraph on 'Normal use' in this user manual.

If the test is successful, the appliance should be fully cleaned, in accordance with the instructions given in the paragraph on 'Cleaning' in the user manual, before delivery from the site to the end customer.

When delivering from the site to the user, the user or person in charge should be given the user manual for each appliance.

## 2. CONTROL PANEL

## 3. NORMAL USE OF THE PLANCHA

- Switch on the appliance, the white light comes on (Fig. 9 Item 10).
- Press down the gas control knob (Fig. 9 Item 9) in the ignition/pilot light position (Fig. 9 Item 4) and at the same time turn the switch (Fig. 9 Item 11) to the ignition position (Fig. 9 Item 8).
- Sparking occurs, the pilot light should remain lit.
- Once the pilot light is lit, turn the switch (Fig. 9 Item 11) to the desired position.
- To circulate water in the groove around the edge, turn the switch to the  position (Fig. 9 Item 6).

## 4. TURNING THE APPLIANCE OFF

- Turn the knob(s) to the off position.
- At the end of the day shut off the gas supply and the electricity supply.

# ADJUSTMENTS – MAINTENANCE

WARNING

Instructions for maintenance operations on an electric appliance or for implementing electric power:

Before any work:

- Disconnect the appliance from its power supply at the circuit breaker.
- Use a suitable checking device to check that there is no voltage present.

*The rules laid down in the 'Electrical Connection' section remain applicable. In addition, all the maintenance operations listed below must be performed after the appliance has been powered off. Unless explicitly stated otherwise, tests following the replacement of a part must only be carried out once the appliance has been reassembled in its factory configuration.*

WARNING

Instructions for maintenance or adjustment operations on a gas-powered appliance or for implementing gas power:

- It is essential to stop the gas supply to the appliance in the case of work on one of the parts of the appliance's gas circuit (use the block valve provided for this purpose). This instruction does not apply to work that requires the presence of gas in the system (e.g. pressure check).
- Although our appliances are pre-set to suit the characteristics of the gas supply at the place of installation (type of gas, expected gas pressure), adjustments to the air setting may be necessary during installation.
- When checking the pressure, please take your measurement at the pressure gauge outlets on the manifolds and not at the gas taps.

*The rules laid down in the 'Gas Connection' section remain applicable. In addition, all the maintenance operations listed below must be performed after the block valve supplying the appliance has been shut off. Unless explicitly stated otherwise, tests following the replacement of a part must only be carried out once the appliance has been reassembled in its factory configuration.*

## 1. PERIODIC CHECKS

Under normal conditions of use, it is recommended to service the appliance once a year. In addition to checking the general operation of the appliance, this service should, include as a minimum:

- A check that the electrical and mechanical elements are in good working order.
- A check of the appearance of cables and connections (appearance, tightness).
- A check of the regulatory and safety components.
- Greasing of the gas taps

## 2. CONTROL PANEL REMOVAL

- Remove the gas control knob.
- The panel can be unclipped.

Fig. 10

### 3. PRESSURE CHECK

The gas pressure check must be performed after installation of the appliance. Indeed, too low a gas pressure may affect the operation of the appliance, which may result in degraded performance (actual power of the burner lower than the expected power, unsatisfactory performance, etc.), or, in some cases, the complete malfunction of the appliance (the burner does not ignite).

In the event of a malfunction in the gas part of an appliance, our after-sales service may ask you to take a gas pressure reading. The following paragraph describes the correct way to measure the pressure on your appliance.

**Note:** To obtain a correct measurement, ensure that all gas appliances connected to the same pipeline are running at their nominal power during the measurement.

- Remove the control knob.
- Remove the control panel (Fig. 10 paragraph 2).
- Unscrew the pressure screw (Fig. 11).
- Connect the pressure gauge to the pressure screw.
- Turn on the appliance at max. output.
- Check your measurements.

**Note:** The flames are reduced to  $\frac{1}{4}$  of their size in the maximum position. The burner must not go out when changing from the maximum position to the minimum position.

Fig. 11

#### INFORMATION

#### Tip:

The pressure gauge outlet can also be used as a bleed port for the gas circuit before the appliance is put into service.

### 4. ADJUSTMENT OF THE WATER FLOW

- Remove the control cover (Fig. 10 paragraph 2)
- Turn the switch (Fig. 12 Item 1) to position  to operate the water run-off.
- Turn the screw clockwise (Fig. 12 item 2) to decrease the flow.

Fig. 12

## 5. COMBUSTION CONTROL (INJECTORS, AIR SUPPLY)

### 5.1. Plancha 700x500 burner adjustment tables

Adjustment	Gas type under nominal pressure	Number engraved on the injector	Air adjustment d (mm) *2	Nominal calorific output kW*1
1	G20: Pn =20mbar	300	2	15.5
2	G25: Pn =20mbar	320	2	
3	G25: Pn =25mbar	300	2	
4	G30: Pn =29mbar	210	4	
5	G30: Pn =50mbar	180	4	
6	G31: Pn =37mbar	210	4	
7	G31: Pn =50mbar	190	4	

### 5.2. Plancha 300x500 burner adjustment tables

Adjustment	Gas type under nominal pressure	Number engraved on the injector	Air adjustment d (mm) *2	Nominal calorific output
1	G20: Pn =20mbar	230	1	10
2	G25: Pn =20mbar	250	1	10
3	G25: Pn =25mbar	230	1	9
4	G30: Pn =29mbar	160	Max.	10
5	G30: Pn =50mbar	135	Max.	10
6	G31: Pn =37mbar	160	9	10
7	G31: Pn =50mbar	145	Max.	10
8	G20: Pn =15mbar	250	1	10

### 5.3. Pilot light adjustment tables

Adjustment	Gas type under nominal pressure	Number engraved on the injector	Air adjustment
1	G20: Pn =20mbar	0.4	1
2	G25: Pn =20mbar		
3	G25: Pn =25mbar		
4	G30: Pn =29mbar	0.2	9
5	G30: Pn =50mbar		
6	G31: Pn =37mbar		
7	G31: Pn =50mbar		

#### 5.4. Procedure for replacing injectors and adjusting the air sleeve

- Release the air sleeve (Fig. 13 Item 3)
- Remove the injector (Fig.13 Item 2), replace it with the desired injector according to the table above (paragraph 4.1)
- Adjust the distance 'd' (Fig. 13) according to the data in the table above (paragraph 4.1)
- Lock the air sleeve in place, seal after adjustment

Fig. 13

#### 5.5. Procedure for replacing the pilot light injectors

- Unscrew the pilot light support (Fig. 14 Item 1)
- Unscrew the pilot gas connection (Fig. 14 Item 2)
- Unscrew the nut (Fig. 14 Item 3) in order to change the injector ((Fig. 14 Item 4)
- Adjust the air intake.

Fig. 14

#### 5.6. Adjusting the low output

- Remove the control cover (Fig. 9 paragraph 2)
- Refit the control knob on the gas tap.
- Set it to the low output position (Fig15. Item 1)
- Tighten the low output screw (Fig.15 Item 2) + or – to reduce the flame by 2/3.

**Note:** The flames are reduced to ¼ of their size in the maximum position. The burner must not go out when changing from the maximum position to the minimum position.

Fig. 15

#### 5.7. Adjustment of low output

#### INFORMATION

Output adjustment is performed in the factory. It may only be modified by qualified personnel. It may need to be adjusted.

## 3. WARRANTY

INFORMATION

The warranty is part of the sale contract. For any installation or work carried out under the warranty, contact an authorised dealer. In addition, we would like to remind you that the CHARVET warranty does not cover damage caused by faulty installation, misuse or inadequate maintenance. Please read this manual in full.

## 4. RESTRICTIONS ON USE

INFORMATION

This appliance must be used by qualified personnel only. It is mandatory that the installer provides training to the users of the appliance once the installation is complete. After the user training, the User Manual (below) must be passed to the final user for their records. CHARVET equipment should not be used by untrained personnel unless they are under the supervision of a person who is liable and can guarantee their safety.

## 5. EQUIPMENT DISPOSAL

INFORMATION

### Exclusively for France:

In accordance with Decree No. 2014-928 of 19 August 2014, concerning the disposal of waste and electrical and electronic equipment, the Paul CHARVET company is responsible for the organisation and financing of the collection and processing of professional EEE placed on the market from 13.08.2005. As such, the CHARVET company is a member of ECOLOGIC, an eco-organisation approved by the state.

### How WEEE is disposed of:

At the end of its life, the equipment must be palletised and made available to the carrier in an accessible place. Except in exceptional circumstances, the equipment shall not have been dismantled, even partially. Otherwise, the CHARVET company reserves the right to re-invoice the costs of processing and taking responsibility for the equipment.

In addition, all requests weighing less than 500 Kg shall either be dropped off by the end user at a collection point or collected from the end user's premises, in which case the end user will be liable to pay the cost of such collection.

## 1. WARNINGS

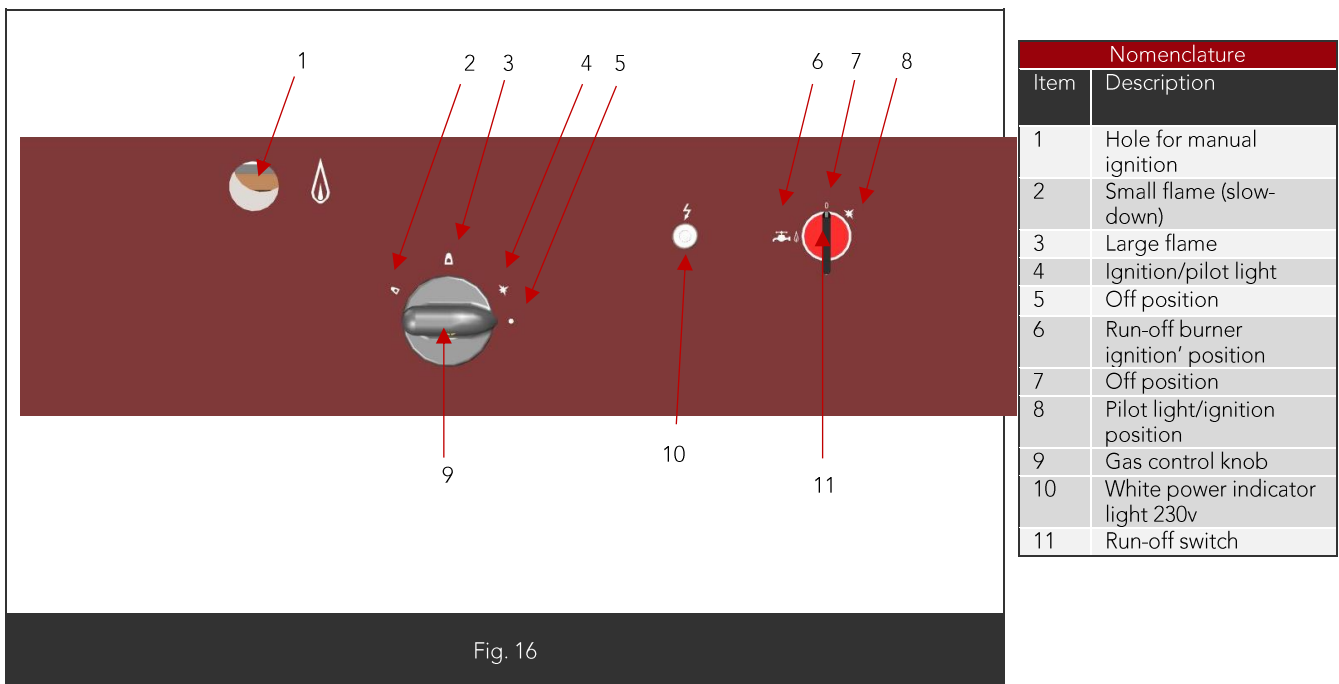

WARNING

This appliance is intended for professional use, and should therefore be used by qualified personnel, as intended and as instructed in this document.  
Any abnormal use of this equipment could have consequences on its operation, but also on the safety of property and persons.  
This appliance is equipped with several safety devices. In case of malfunction, please cut off all supplies (electricity, gas, water, etc.) and contact a qualified installer for repair.

- Do not attempt to repair a defective appliance by yourself, in case of malfunction, please isolate the device (cut off its supplies, and limit access to the appliance to authorised persons only), pending the work by the installer.
- Do not use an appliance when it has gone into safe mode, do not attempt to bypass its safety device(s).
- Never use an appliance, especially when empty, without supervision.
- This equipment should be revised at least once a year by a qualified installer.
- Some parts of this appliance are protected by the manufacturer, in case of a fault, contact the installer for replacement or repair.

Neither the CHARVET company nor the installation company shall be liable for damage and/or injuries resulting from improper maintenance, misuse, or unauthorised modification of this appliance.

## 2. CONTROL PANEL

## 3. NORMAL USE

- Switch on the appliance, the white light comes on (Fig16. Item 10).
- Press down the gas control knob (Fig. 16 Item 9) in the ignition/pilot light position (Fig. 16 Item 4) and at the same time turn the switch (Fig. 16 Item 11) to the ignition position (Fig. 16 Item 8).
- Sparking occurs, the pilot light should remain lit.
- Once the pilot light is lit, turn the switch (Fig. 16 Item 11) to the desired position.
- To circulate water in the groove around the edge, turn the switch to the  position (Fig. 16 Item 6).

## 4. TURNING THE APPLIANCE OFF

- Turn the knob(s) to the off position.
- At the end of the day shut off the gas supply and the electricity supply.

# CLEANING & MAINTENANCE

## 1. WARNINGS

WARNING

Before cleaning the appliance, make sure that the parts to be handled have cooled down or equip yourself with suitable protection.

It is preferable to clean and maintain this equipment after switching it off.

This appliance must not be cleaned by means of water spray, water jets under pressure or steam.

The use of bleach and/or acid, even heavily diluted, is absolutely prohibited.

WARNING

The solid top is heavy and does not need to be lifted during normal use of the appliance.

## 2. CLEANING THE OUTER SURFACES

- Turn off and wait until the elements near the plate have cooled down.
- After each service and before cleaning, we strongly advise you to disconnect the gas supply and turn appliances off.
- Wash with a sponge in soapy water or any other neutral cleaning product.
- After each cleaning, rub with an oily rag.

## 3. CLEANING THE STEEL PLATE

- If scraping is necessary, this should be done while the appliance is warm and using a Scrappy scraper, which is not supplied with the equipment (see reference in the spare parts list).
- Never clean a steel plate by deglazing.
- Dry the plate thoroughly after cleaning to avoid any risk of rust forming and then wipe with an oily cloth after drying.

**Note:** Clean the drain hole regularly with a small cleaning brush or similar tool.

## 4. USING THE SCRAPER

- To scrape the steel plate, position the scraper flat as in Figure 17 below.
- Dispose of the waste through the drain tube that will drain into the waste bucket.

**Note:** The groove around the edge collects residues of food and grease. We strongly recommend collecting larger pieces of waste using a spatula in order to limit the risks of blocking the appliance's drain.
